

Linked List Traversal

The task is to traverse the given linked list in straight order.

For example for the following linked list:

The order of traversal should be:

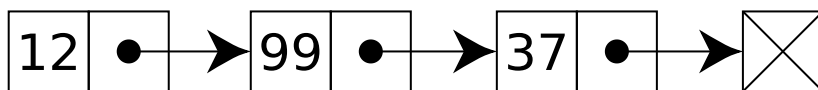

```
12 → 99 → 37
```

The time complexity is $O(n)$ because we visit every node only once.

Reversed Linked List Traversal

The task is to traverse the given linked list in reversed order.

For example for the following linked list:

The order of traversal should be:

```
37 → 99 → 12
```

The time complexity is $O(n)$ because we visit every node only once.
